

a. Technical Aspects

- **What problem does the system solve?**
 - Improves efficiency in operations
 - Automates manual processes
 - Enhances data management
 - **What architecture is used?**
 - Monolithic architecture
 - Microservices architecture
 - Serverless architecture
 - **How is scalability managed?**
 - Horizontal scaling (adding servers)
 - Vertical scaling (upgrading hardware)
 - Cloud-based auto-scaling
 - **What security mechanisms are implemented?**
 - Encryption (SSL/TLS)
 - Authentication and authorization
 - Firewalls and intrusion detection systems
 - **How is data stored and processed?**
 - Relational databases (SQL)
 - NoSQL databases
 - Cloud storage solutions
 - **What APIs or integrations exist?**
 - RESTful APIs
 - Third-party integrations
 - Internal service APIs
 - **How is performance optimized?**
 - Caching mechanisms
 - Load balancing
 - Code optimization techniques
-

b. Software Aspects

- **Which programming languages are used?**
 - JavaScript / TypeScript
 - Python
 - Java
 - **What frameworks or libraries are applied?**
 - React / Angular
 - Django / Flask
 - Spring Boot
 - **Is the software open-source or proprietary?**
 - Fully open-source
 - Fully proprietary
 - Hybrid (mixed licensing)
 - **How is version control handled?**
 - Git with GitHub
 - Git with GitLab
 - Bitbucket repositories
 - **What testing strategies are used?**
 - Unit testing
 - Integration testing
 - End-to-end testing
 - **How often are updates released?**
 - Continuous deployment
 - Scheduled releases (weekly/monthly)
 - On-demand updates
 - **Is documentation available?**
 - Full technical documentation
 - User manuals and guides
 - Minimal or internal-only documentation
-

c. Hardware Aspects

- **What are the minimum system requirements?**
 - Low-end devices (basic specs)
 - Mid-range systems
 - High-performance machines
- **Which devices are supported?**
 - Desktop computers
 - Mobile devices
 - Tablets
- **How much RAM and storage are needed?**
 - 4GB RAM, 128GB storage
 - 8GB RAM, 256GB storage
 - 16GB+ RAM, 512GB+ storage
- **Is special hardware required?**
 - No special hardware
 - Dedicated servers
 - Sensors or IoT devices
- **How is hardware maintenance done?**
 - Regular manual checks
 - Automated monitoring tools
 - Outsourced IT support
- **What is the expected lifespan of devices?**
 - 2–3 years
 - 3–5 years
 - 5+ years
- **Are there backup hardware options?**
 - Backup servers
 - Redundant systems
 - Cloud-based backups
